

Sukriti Pandey

Senior Product Designer · Product Strategy & UX · Design-to-Code Delivery

sukriti1908@gmail.com · [linkedin.com/in/sukritipandey1908](https://www.linkedin.com/in/sukritipandey1908) · Hyderabad, India · Open to relocation

PROFESSIONAL SUMMARY

Product designer with 4.5+ years at Deloitte, owning enterprise products end to end — research and strategy through interaction design, front-end build, and post-launch iteration. I operate as sole designer-developer on complex initiatives, turning ambiguous requirements into shipped platforms used daily by thousands, and have grown the practice itself: co-establishing UX as a formal team capability and upskilling colleagues onto new tooling. Deeply fluent with AI-assisted design and delivery, including a Figma-to-production pipeline via MCP servers that cut project timelines by 75%. Drawn to the behavioural question underneath every interface — what actually makes someone adopt, complete, or change how they work.

CORE SKILLS

- **Product Strategy & Thinking:** Requirements Definition, Roadmap & Prioritisation, Feasibility Assessment, Opportunity Framing, Stakeholder Alignment
- **Product & UX Design:** Interaction Design, Information Architecture, Wireframing, High-Fidelity Prototyping (Figma, Figma Make, Adobe XD), Visual Design, Accessible Design (WCAG)
- **Research & Behaviour:** User Interviews, Usability Testing, Research Synthesis, Gamification, Behavioural Design (Octalysis)
- **AI-Assisted Workflows:** MCP Servers, Figma Make, GitHub Copilot, Prompt Engineering, Design-to-Code Pipelines
- **Front-End & Build:** HTML, CSS, JavaScript, jQuery, API Integration, SharePoint, Supabase, Responsive Design
- **Automation & Tooling:** Nintex, Kwiz, Workflow Automation, Enterprise Tool Development
- **Leadership & Enablement:** Senior Leadership Presentation, Mentoring & Onboarding, Cross-Team Capability Building, Design Practice Establishment, Stakeholder Influence

WORK EXPERIENCE

Deloitte (US Offices), Hyderabad, India

UX Designer 2 · Jun 2025 – Present

Analyst, UI/UX Design & Development · Jan 2022 – Jun 2025

Scope spans product strategy and requirements definition, user research, end-to-end design, and front-end development — operating as sole designer-developer or design lead within a small team.

- **Project Tracker — End-to-End Product Ownership:** Led requirements discovery with team leads, then designed and built a centralised project tracker now live and used daily by 60+ people. Own the full product lifecycle post-launch — running feedback, prioritisation, and release cycles that grew it from a simple intake form into a full operational platform.
- **AI-Driven Design-to-Production Pipeline:** Built a workflow connecting Figma design files directly to production code via MCP servers — establishing components and auto-layout in Figma Make, refining in Figma Design, then generating deployable HTML. Cut project timelines from ~40 hours to 10 on animated microsites, with build time alone dropping from ~30 hours to 2, while retaining manual refinement and quality checks before ship.
- **Review Platform — Complex Workflow Design:** Designed and built a centralised review platform replacing manual, email-based workflows — now managing 178+ requests with multi-document uploads and role-specific interfaces for requesters and admins, measurably improving operational efficiency and transparency.
- **Research-Led Initiative Design:** Conducted 10–15 user interviews to understand barriers to cross-team collaboration, then designed a low-friction engagement model from those findings. Iterated against adoption signals, resulting in 9 cross-functional project collaborations. (Gigs on Teams)
- **Intranet Hub — Design at Scale:** Key contributor to an 8-site intranet hub during a business restructuring, reaching 130,000+ unique homepage visitors and restructuring scattered content into navigable information architecture.
- **Senior Leadership Engagement:** Work directly with Chief Management Office teams and other senior stakeholders on high-visibility projects — pitching concepts for early buy-in, then presenting and defending the finished work. Comfortable making the case for design decisions to people who don't think in design terms.
- **Growing the Practice — Team Capability & Enablement:** Co-advocated with senior leadership to establish UX as a formal team capability, evolving the function from developer-only scope. Also drive AI adoption within the team — experimenting with emerging AI-assisted workflows and teaching them to colleagues, recognized by senior leadership for bringing the team's AI practice to a level comparable with more technically-oriented functions. Led the platform migration from Nintex to Kwiz on a two-month deadline — rebuilding 8–10 automation tools and personally upskilling two teammates onto the new platform.
- **Behavioural & Interaction Design:** Designed and built gamified learning experiences applying behavioural design principles to drive engagement and completion — including a Jeopardy-style learning game taken concept-to-code, saving ~40 hours of development time.

Recognition:

- Promoted to UX Designer 2 (Jun 2025)

- 3x recognized for outstanding delivery (Spot / High Five Awards)

Joined as an intern (Jan–Jun 2022); converted to full-time upon completion.

EDUCATION

SRM Institute of Science and Technology, Chennai, India

BTech in Electronics and Telecommunication Engineering (Specialization: Biomedical Engineering), 92%

2018 – 2022

LEADERSHIP & EARLY CAREER

- Founding Member & Research Lead, Climac Labs (2019–2022): Co-founded a ClimateTech startup; led a team developing carbon capture solutions.
- Hackathon wins: Best Sustainability Hack (HackHarvard 2021), IoT Centre of Excellence First Place (SRM), Smart India Hackathon Finalist.
